(a) bandas del sistema sin paredes, $n = 12$
k complejo
pared: $k_+ \leftrightarrow k_-$
k complejo
ω
k (onda plana e^{ikj})
(b) Fourier de un eigenestado ($n = 40$, $m = 7$)
k_-
k_+
$|\tilde{R}(k)|^2$
$|\tilde{L}(k)|^2$
k
(c) interferencia: $P_j = A_0[1 + D\cos(2qj + \delta)]$, $D = 0.79$
suma de 2 ondas planas
P_j (diag. de U)
cada onda sola
j
